PROFILE

- Highly motivated Data Science student with a strong foundation in data analysis, machine learning, and software development, with hands-on internship experience delivering measurable business impact.
- Seeking an entry-level Data Analyst or Backend Developer role to leverage expertise in Python (Pandas, NumPy), SQL, and Power BI for developing data-driven solutions and optimizing business processes.
- Eager to contribute to innovative projects within the banking, telecommunications, or technology sectors. Available for internships and entry-level positions starting immediately.

EDUCATION

Bachelor of Science in Data Science (Expected 2028)

Oct 2024 – Present

Alexandria University – Faculty of Computers and Data Science | Alexandria, Egypt

- Major: Computer Science | Minor: Intelligent Systems
- Relevant Coursework: Machine Learning, Neural Networks, Database Management, Python, Java, Mathematics for AI, Web Development.

WORK EXPERIENCE

AI & Machine Learning Trainee

Jul 2026 – Present

Information Technology Institute (ITI) | El Arish, Egypt

- Enrolled in an intensive AI and Machine Learning training program (Level 01), covering the full data science pipeline from data preprocessing to model evaluation.
- Building supervised and unsupervised machine learning models using Python (Scikit-learn, Pandas, NumPy) to solve real-world classification and regression problems.
- Applying core data preprocessing techniques, including data cleaning, feature engineering, and normalization, to prepare datasets and improve model performance.
- Collaborating with a cohort of trainees on hands-on labs and mini-projects, strengthening practical skills in algorithm selection, model evaluation metrics, and performance tuning.

Data Analysis Intern

Nov 2024 – Present

Digital Egyptian Pioneers Initiative (DEPI) | Alexandria, Egypt

- Executed end-to-end data analysis including cleaning, transformation, and modeling using Power Query and Power Pivot across 3+ datasets, utilizing Python libraries such as Pandas and NumPy for advanced data manipulation.
- Developed 5+ interactive Power BI and Excel dashboards visualizing key performance indicators (KPIs) for project stakeholders, improving data accessibility and reporting efficiency.
- Drove strategic decisions by interpreting data insights, achieving a 20% improvement in project outcomes for DEPI through data-driven recommendations.
- Collaborated with 10+ cross-functional team members to identify and implement data-driven solutions for economic and social development challenges.

PROJECTS

Patient Health Data Analysis Dashboard | Power BI

- Analyzed 1,000+ patient health records to identify key health trends and risk factors using statistical analysis and data visualization techniques.
- Developed an interactive Power BI dashboard with 4 report pages visualizing emergency cases and patient outcomes, enabling 30% quicker response strategies for healthcare stakeholders.

Determinants of Real Exchange Rate in Egypt | Econometrics

- Conducted economic research and data analysis to identify key factors influencing the real exchange rate in Egypt.
- Applied statistical modeling and regression analysis (OLS) to interpret economic data.

Student Grading System | Java & OOP

- Developed a complete OOP project using Java to manage student records, grades, and performance tracking.
- Implemented features for adding, updating, and calculating student grades by name and ID.

Movie Dataset Analysis | Python & Tableau

- Analyzed 2,000+ movies dataset (up to 2018) using Python (Pandas, Matplotlib, Seaborn) to uncover rating trends, genre distributions, and audience preferences through statistical analysis.
- Built an interactive Tableau dashboard visualizing top-rated films, genre breakdowns, and rating distributions to deliver actionable insights for content recommendation strategies.

Game Development (Sudoku & Connect 4) | Java

- Engineered two classic logic games using Java and OOP principles, demonstrating strong problem-solving and algorithmic thinking.

COURSES

Introduction to Artificial Intelligence – Udemy

Nov 2024

- Covered basic machine learning techniques, data processing, and fundamental AI concepts.

Web Development Foundations – Coursera

Jan 2026

- Mastered foundational principles of front-end and back-end development including HTML, CSS, and core web technologies.
- Developed practical skills in building responsive and interactive web applications.

Database Management & SQL

Ongoing

- Developing strong understanding of relational databases, SQL querying, and data management fundamentals.

SKILLS

- Data Analysis & BI: Excel (Advanced), Power Query, Power Pivot, Power BI (Dashboards), DAX, Tableau
- Software & Web Development: Python (Pandas, NumPy, Matplotlib, Seaborn), Java, OOP, HTML, CSS, SQL, Front-end Foundations, VS Code
- Data Science & AI: Machine Learning (Supervised/Unsupervised), Neural Networks, Data Processing
- Statistical Modeling: Econometrics, OLS Regression, Statistical Analysis
- Languages: Arabic (Native), English (Professional Proficiency)
- Soft Skills: Fast Learner, Problem-Solving, Team Collaboration, Leadership, Communication, Time Management
